Bead Seater

The Right Tool

Our bead seating tool delivers a large volume of pressurized air into the cavity of tubeless tires with the push of a button, to help “seat” stubborn beads.

Our bead seater makes the process not only safe, but simple and economical.

The Schrader Bead Seater turns one of the most frustrating and time consuming Tire shop jobs into one of the quickest and easiest. Simply fill the Bead Seater to the necessary pressure, aim the barrel between the tire bead and wheel flange, and push the valve to release blast of air that will seat the bead.

Features

- Two “feet” welded to the tank provide stability.
- Designed for commercial use, this tool can be used on tires ranging from large (24.5”) truck tires to small ATV tires.
- Powder coated tank inside and out to prevent rust and deterioration from airline moisture.
- Fully ASME and CE tested and certified

Safety

- Safety pop-off valve prevents overloading
- Release valve safeties prevent inadvertent discharge
- Double barrel option guides air around the wheel for better “lift”
- A push-button air trigger allows for safer operation. Air trigger releases air 20% faster than a manual valve and it is located so that both hands can remain on the tank.
- Includes safety goggles and earplugs with every unit

1. Air Release Trigger with Safety Lockout
2. Fill Valve
3. Pressure Gauge
4. Earplugs
5. Automatic Valve
6. Double Barrel Inflation Tube
7. Single Barrel Inflation Tube
8. Coiled Hose with Chuck
9. Safety Goggles
10. Safety Valve 150 psi
